

Metrea Mission Data Carbon Reduction Plan

January 2024

Our Commitment

MMD is committed to achieving Net Zero by 2050

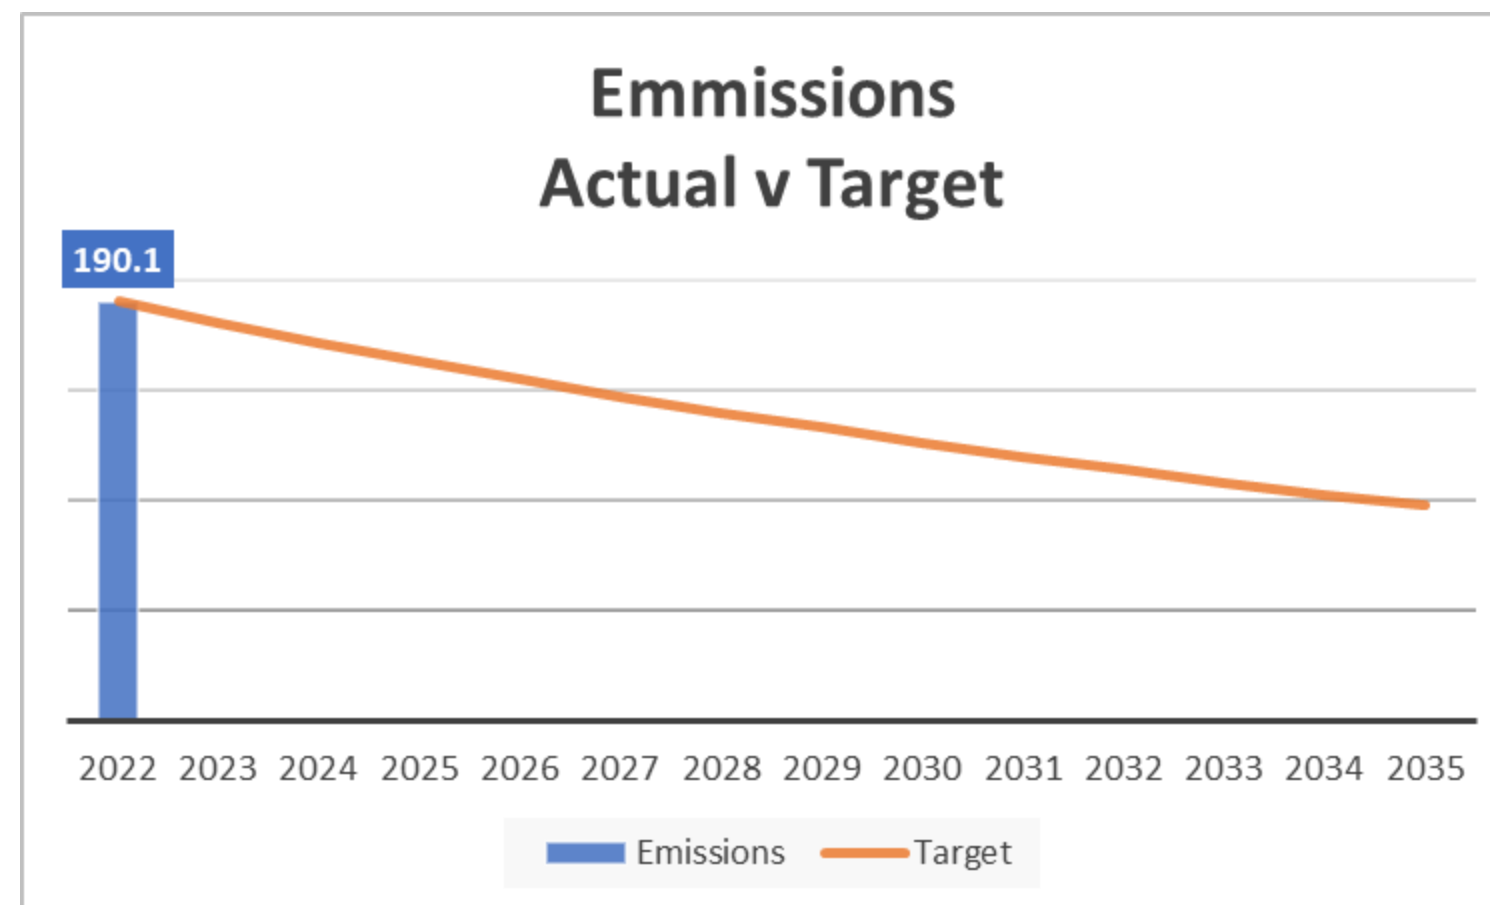

Scope 1 & 2 Emission Reductions

MMD aims for 50% reduction in its scope 1 and scope 2 emissions from its baseline by 2035. It plans to achieve this through an ongoing series of carbon reduction projects whilst turning to low-carbon electricity suppliers, energy efficiency upgrades and conservation.

Scope 3 Emission Reductions

MMD aims for 50% reduction in its scope 3 emissions by encouraging employees to utilize sustainable transportation options.

How Will We
Achieve this?

MMD runs several carbon reduction initiatives

Improving how and when we travel

We've introduced hybrid vehicles to our new corporate fleet and introduced both a cycle-to-work and electric vehicle salary sacrifice scheme. We use a mixture of remote and hybrid working policies to minimise the time we spend travelling.

Renewable Energy for Facilities

In both Lincoln and Harwell, we've relocated our offices to facilities that have invested in renewable energy sources and are as focused as we are on exploring the latest energy-efficient technologies

Recycling and re-use

We've focused on educating our team on the benefits of recycling and look to repair and re-use equipment wherever possible to minimise the amount of our equipment that reaches landfill.

Baseline 2022
Total Emissions
Scope 1, 2 & 3
190.1 tCO₂e

Scope 1

Scope 1 emissions cover the Green House Gas (GHG) emissions that a company makes directly — for example while running its boilers and lease vehicles.

0.0 tCO₂e

Scope 2

Scope 2 emissions are those made indirectly – such as electricity or energy purchased for heating and cooling buildings, is being produced on its behalf.

17.8 tCO₂e

Scope 3

Scope 3 emissions associated, not with the company itself, but that the organisation is indirectly responsible for, up and down its value chain. For example, from buying products from its suppliers, and from its products when customers use them.

172.3 tCO₂e

MMD

2022 Emissions

**MMD 2022
Total Emissions
Scope 1,2 & 3
190.1 tCO₂e**

Scope 1

Scope 1 emissions cover the Green House Gas (GHG) emissions that a company makes directly — for example while running its boilers and lease vehicles.

0.0 tCO₂e

Scope 2

Scope 2 emissions are those made indirectly – such as electricity or energy purchased for heating and cooling buildings, is being produced on its behalf.

17.8 tCO₂e

Scope 3

Scope 3 emissions associated, not with the company itself, but that the organisation is indirectly responsible for, up and down its value chain. For example, from buying products from its suppliers, and from its products when customers use them.

172.3 tCO₂e

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard and uses the appropriate Government emission conversion factors for greenhouse gas company reporting.

Due to the impacts and uncertainty on travel caused by the COVID pandemic, we have re-baselined our Carbon Reduction Plan to 2022 to better reflect the path to zero emissions for MMD.
